

Coding & Solution

Date	03 October 2028
Team ID	SWTID-2026-6385
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	Not applicable – implemented directly in the ServiceNow instance; changes tracked using Update Sets
Programming Language(s)	JavaScript (ServiceNow server-side scripting for ACL advanced script)
Framework(s) Used	ServiceNow Platform – Tables, Roles, and Access Control (ACL) rules
Key Features Implemented	1. Created users and assigned required roles 2. Created the Institution Details table with required fields and branch values 3. Configured script-controlled ACL for Read, Create and Write operations 4. Configured Delete ACL and verified access permissions 5. Implemented role-based access to restrict records based on field value
Pending / Incomplete Features	None. Future enhancement: move the ACL logic into a reusable Script Include and extend it to multiple tables
Setup / Run Instructions	1. Log in to the ServiceNow instance as an administrator 2. Create the Institution Details table with the required fields and branch values 3. Create the custom role and assign it to the required users 4. Create the Read, Create, Write and Delete ACLs with the advanced script 5. Impersonate users with and without the role to verify allowed and restricted records

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	No
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	No

Additional Notes / Comments:

The solution restricts access to Institution Details records based on the Branch field value using script-controlled ACLs for Read, Create, Write and Delete operations. All changes were tracked using ServiceNow Update Sets, and the behavior was verified by impersonating users with different roles.
