

Functional & Performance Testing Template

Model Performance Test

Date	03 October 2026
Team ID	SWTID-2026-6385
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	

Test Scenarios & Results

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Input Validation – Branch choice and record form fields (Student Roll Number, Student Name, Faculty Name, Email, Phone Number)	Open a new Institution Details record and check the Branch dropdown; enter valid values and save	Branch offers only ECE, EEE and CSE; valid record is saved	Branch drop-down shows only ECE, EEE and CSE. Sample records STU100, STU200 and STU300 were created and saved successfully.	Pass
FT-02	Role-based Create, Write and Delete validation (bb2, bb3, bb4)	Check the CREATE, WRITE and DELETE ACLs on u_institution_details and the role required by each	Create needs bb2, Write needs bb3, Delete needs bb4; users without the role are denied	Four ACLs (create, read, delete, write) are active on the table. CREATE, WRITE and DELETE ACLs require bb2, bb3 and bb4 respectively.	Pass
FT-03	Branch-based Read access (Script-Controlled ACL)	Log in as administrator and view the list; then impersonate EEE User (role bb1) and open the Institution Details list	Administrator sees all records; EEE User sees only Branch = EEE records	Administrator sees all 3 records (ECE, EEE, CSE). EEE User sees only the EEE record (STU200).	Pass

FT-04	Platform Connection Check (user login and impersonation)	Use Impersonate user to switch to EEE User and another user (Abel Tuter), then return to administrator	Impersonation works and the correct user's access applies	Impersonation of EEE User and Abel Tuter worked; access changed according to the user's role.	Pass
Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
PT-01	Response Time Test	Use a timer to measure how long the list or record opens after the ACL check for each user	Should be under 2 seconds	The list or record opened within 2 seconds after the ACL check.	Pass
PT-02	Concurrent Access Test	Log in with several users (bb1, bb2, bb3, bb4, admin) at the same time and open records	ACL checks should not slow down or give wrong results	Multiple users accessed records simultaneously, and the ACL checks worked correctly without incorrect access permissions.	Pass
PT-03	Record Volume Load Test	Add around 100 sample records and open the list as admin and as EEE User	Works smoothly; EEE User still sees only EEE records	100 sample records were tested. The EEE user could view only EEE branch records, while the admin could access all records.	Pass
