

Scalability & Future Plan

Date	03 October 2028
Team ID	SWTID-2026-6385
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	ACL script has the restricted field value and roles written directly in the code (hard-coded)	Any change in condition needs a script edit and re-testing	High
2	Restriction works on one table and one field only	Cannot be reused for other tables without duplicating ACLs	Medium
3	Tested only with a small set of test users and records	Behavior with large user groups and high record volume is not verified	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Small team of test users with a few roles	Use groups and role inheritance instead of assigning roles individually
2	Data Storage	Small custom table with sample records	Archive old records and add indexes on the field used in the ACL condition
3	Performance	Simple script runs on every record access	Keep scripts lightweight, avoid GlideRecord queries inside ACL, use system properties or cached values
4	Security	One script-controlled ACL for read access	Add ACLs for write, create, and delete, apply least-privilege roles, and review access regularly

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Script-controlled ACL on one table based on a field value	Completed	Core restriction of records is working
Phase 2	Move conditions to system properties and a reusable Script Include	1 – 2 months	Easy changes without editing ACL scripts
Phase 3	Extend the ACL to multiple tables and field-level restrictions	3 – 4 months	Wider data protection across the instance
Phase 4	Add audit logging, access reports, and a dashboard for denied access	5 – 6 months	Better monitoring and compliance
